Cause Narrative							~.·· =»		
Calciner began to NOx when	feed hopper ran			assigne	d to that jo	b.			
Contributing Causes Root/Primary Causes									
No operator assigned to #1RC even though the job was running.		180 - Immediat Supervision	ate 181 - Preparation 18		183 - Job	33 - Job Plan LTA			
CRT continued to operate the calciner even though there was no operator assigned to the job.		192 - Communication				97 - Communication Between hifts and Management LTA			
Calciner operators should have realized that the feed hopper was running empty even though the extruder operator is generally responsible for keeping the feed hopper empty.		163 - Training	170 - Training LTA 17		175 - On	5 - On-the-Job Training LTA			
Explanation of Root Causes									
180/181/183 - Previous shift GL's create line up for the next shift, #1RC was running during the previous shift but there

Page: 1

was no operator assigned to that job for the upcoming shift.
192/194/197 - CRT likely assumed there was someone running the calciner even though there was no one specified on the line up.

163/170/175 - Experienced operators will know to feed the calciner based on sounds that the feed hopper makes when running empty. This would have been a sign prior to the calciner NOxing to load the hopper.

Any known or potential off-site impacts?	No	PSM Incident?	No	Estimated Cost:	5,000.00 USD
